Introduction

Advances in Sleep-Related Breathing Disorders

What I knew, as a head and neck oncologic surgeon, could have been written on a 'postage stamp,' and I have memories of 2 patients presenting with sleep-related breathing difficulties, which on investigation were due to an underlying malignancy! During my early years of training in the 1970s, all snoring problems were 'solved' by some form of nasal septal surgery with or without surgery to the oropharynx!

Sleep-related breathing disorders encompass a wide range of conditions, in which there is recurrent partial or complete cessation of breathing, and includes simple snoring, upper airway resistance syndrome, central sleep apnea-hypopnea syndrome, obesity-related sleep hypoventilation syndrome, and obstructive sleep apnea-hypopnea syndrome. Sleep-related breathing disorders, more so obstructive sleep apnea-hypopnea, can increase the risk of cardiac arrhythmias, pulmonary and systemic hypertension, myocardial infarction, type 2 diabetes mellitus, cerebrovascular accidents, impaired cognition, and road traffic accidents. The pathophysiology of sleep-related breathing disorders is complex, and the explanations usually involve several anatomical and other factors; obesity, increased neck circumference, craniofacial abnormalities and other variations (retrognathia, macroglossia, nasal obstructive pathologies), hypothyroidism, acromegaly, family history, excessive alcohol intake, or sedative ingestion. Many of the advances in the diagnosis and the formulation of modern treatment strategies have been developed through collaborative work in a multiprofessional and multidisciplinary environment.

While a number of 'large textbooks' have been published on 'sleep and breathing disorders' and 'obstructive sleep apnea,' this volume edited by Prof. Philip Lin (Hsin-Ching), Chairman of the Department of Otorhinolaryngology, and Director of Laryngology and Sleep Surgery, at Kaohsiung Chang Gung Memorial Hospital, Taiwan, has drawn upon his professional colleagues, friends and acquaintances from around the world to contribute chapters summarizing
